In The Mix is a two-day, interactive workshop designed for undergraduates to gain hands-on experience with data science, chemistry theory, and experimental techniques that are critical to the development of materials for new generations of energy storage technologies. Participants will also tour Alliant Energy's English Farms wind power station (near Montezuma, IA) and have a discussion with the site managers to learn about environmental impacts of wind power, including a new system to reduce impact on local bat populations. All meals are for the event are provided. Financial assistance for lodging is available.
